## Senior Software Engineer

Nervecentre Software Ltd is a dynamic and innovative UK based organisation developing pioneering software systems for the global healthcare market which improve patient safety and provide clinical staff with access to real-time patient information.

The product suite integrates mobile and server technology to provide services which free clinicians from desktop PCs and allow them to leverage real-time patient and hospital information to make timely and appropriate clinical decisions.

Company culture is centred around patient care and providing quality solutions and support to our customers.

The role of senior software engineer is to be a key senior member of the development team to support the rapid growth of the business and the move to a cloud based platform.

As a Senior Software Engineer you will play a crucial role in delivering high quality software to customers by designing, developing, optimizing, scaling and driving innovation into the product suite.

The role offers a rewarding environment with strong opportunities to influence the product development, architectural direction, innovative development and to learn new skills. This role is based in our Berkshire office (Wokingham) but with flexible/remote working options.

### Key accountabilities:

- Provide technical expertise in the design, development and delivery of the product whilst adhering to coding standards, requirements, quality and timelines.
- Maintain high standards of software quality and technical excellence within the team
- Proactively identify issues and areas of concerns and improvements.
- Support deployment, maintenance and new releases support activities.

### Experience required:

- 5+ years commercial experience with Java and Javascript
- Experience with front-end technologies (HTML, Javascript, CSS and Javascript frameworks)
- Experience with multi-threading and concurrency
- Knowledge of SQL
- Analytical and problem solving abilities
- Computer science or engineering degree preferred
- Good working knowledge of cloud based systems would be advantageous
- A passion for engineering excellence through automation, unit testing and process improvements.
- Positive and proactive team player

Interview and onboarding for this role can be done remotely.

This role offers a competitive salary plus benefits and flexible working.
